Otelsan Buklet Malzemeleri Otel Ekipmanları ve Mimarlık Hizmetleri A.Ş.

The hinge is of crucial importance as it is the main part that supports the wall plate to carry the weight. We use Q51mm diameter Stainless Steel AISI304 tube.
NOT PLASTIC!!!

Bu parça, ağırlığı taşımak için duvar montaj plakasını destekler. Q51mm çaplı AISI304 Paslanmaz Çelik kullanıyoruz.
PLASTİK DEĞİL!!!

SAFETY FIRST

Safety is of paramount importance to Noksi. Sharp edges, known as burrs that naturally occur during production. Are removed and bended to ensure safe handling

Üretim esnasında oluşan keskin kenarları önlemek için köşeler bükülmüştür.

The back side of Z Fold Paper Towel Dispenser is Stainless Steel.
NOT PLASTIC!!!

Z Havlu Kağıt Dispenserin arka yüzü Paslanmaz Çeliktir.
PLASTİK DEĞİL!!!

The lock is Zinc chrome plated. The key is Brass chrome plated.
NOT PLASTIC!!!

Kilit çinko krom kaplamadır. Anahtar piriç krom kaplamadır.
PLASTİK DEĞİL!!!

Benefits of Stainless Steel over Plastic

Hygienic

Stainless steel has a low bacterial retention capacity, making it a very attractive material for hygiene-critical environments.

Durability

Stainless steel is a highly resilient metal and known for its strength and durability, allowing it to withstand the wear and tear of everyday activities.

100% Recyclable

Unlike plastic. Stainless Steel is extremely eco-friendly as it is 100% recyclable and non-degradable, it can be recycled and made into something new without the need to add new materials.

Modern and Sleek Look

Stainless steel products have elegant and modern look used in high-class metal accessories.

No Coating required

Stainless steel is naturally shiny and does not require any protective coating, as it is, by nature, resistant to corrosion and rust.

Easy to Clean

It's smooth, sheen-like non-porous surface means that the likes of dirt and grime struggle to establish themselves on its exterior. Simply wet a cloth with warm water and wipe away dust and dirt.

Value

Stainless steel is a durable, recyclable, low maintenance material and is often the least expensive choice in a life cycle cost comparison.

Paslanmaz Çeliğin Plastiğe Göre Faydaları

Hijyenik

Paslanmaz çelik yüzeyinde bakterilerin tutunmasını zorlaştıran bir özelliğe sahiptir, hijyen açısından kritik ortamlar için tercih sebebidir.

Dayanıklılık

Paslanmaz çelik, oldukça esnek bir metaldir ve sağlamlığı ile bilinir. Aşınmaya ve yıpranmaya karşı dayanıklıdır.

%100 Geri Dönüştürülebilir

Plastikten farklı olarak Paslanmaz Çelik, %100 geri dönüştürülebilir olduğundan son derece çevre dostudur.

Modern ve Şık Görünüm

Paslanmaz çelik ürünler, birinci sınıf metal aksesuarlarda kullanılan zarif ve modern bir görünüme sahiptir.

Kaplama gerektirmez

Paslanmaz çelik doğal olarak parlaktır ve herhangi bir koruyucu kaplama gerektirmez, doğası gereği korozyona ve paslanmaya karşı dayanıklıdır.

Temizlemesi kolay

Pürüzsüz, parlak benzeri gözeneksiz yüzey, kir ve kirecin dış yüzeye yerleşmesini zorlaştırır. Ilık suyla ıslatılmış bez ile tozu ve kir kolayca silinir.

Değer

Paslanmaz çelik, dayanıklı, geri dönüştürülebilir, az bakım gerektiren bir malzemedir ve genellikle yaşam döngüsü maliyet karşılaştırmasında en ucuz seçeneklerdendir.

Paslanmaz Çelik Bakımı

Paslanmaz çelik'in en önemli iki elementi Krom ve Nikel'dir. Paslanmaz çelik parlaklığını kromdan ve paslanmazlık özelliğinden nikelden alır. Paslanmaz çelik, yapı olarak pas tutmaya eğilim gösterdiği durumlar vardır, bu ancak metaller ile uzun süre temas halinde ortaya çıkabilir.

Paslanmaz çelik ürünlerinizi doğru bakım uygulayarak çok daha uzun ömürlü yapabilirsiniz. Ürünlerinizi dikkatli kullanırsanız, paslanmaz çelik kalitesini ve görünümünü devamlı koruyabilirsiniz.

• Paslanmaz Çelik Ürünün Temizlenmesi

Günlük bakım için, sadece temiz suyla veya ıslak bez ile temizlenmesini tavsiye ederiz. Yüzeydeki toz, kurumuş lekeler, yiyecek ve içecek kalıntıları ile benzeri kirlilik yaratan artıkları ıslak bir bez ile temizlenmeli.

Kurumuş yağ lekeleri için bulaşık deterjanı da kullanılabilir. Temizleme işleminden sonra yüzey tamamen kurulanmalıdır. Bulaşık deterjanı çamasır suyu içermemelidir, örn. Cif.

• Kimyasal Maddelerden Dolayı Olusan Lekeler

Ürün güçlü kimyasallar ile temas halinde zarar görür. Yüzey kimyasal maddeler ile uzun süre temas halinde kalırsa, yüzeyde oksitlenmeler oluşabilir ve bu durumdan ötürü paslanma başlayabilir.

Paslanmaz çelik ile temasta bulunulmaması gereken bazı kimyasal ürünler başlıca şunlardır: S-39 solder ux, boya çıkarıcılar, fırça temizleyicileri, metal kazıcılar ve yapıştırıcılar.

Ürünün yukarıda belirtilen herhangi bir kimyasal ile teması halinde, aşağıdaki önlemlere başvurulabilir:

- Etkilenen yüzeyi temiz suyla bolca temizleyiniz;
- Etkilenen yüzeyi kurulayınız;
- Paslanmaz çelik koruyucuları kullanınız;

Temizleme suyu kireçli ise yüzeyde leke bırakabilir. Bunun için temizleme sırasında sert tanecikli ve lif yapıda olmayan bir bez kullanılmalıdır.

Paslanmaz ürünün yüzeyindeki kalan parmak izleri için de cam yüzeyleri temizlemek için kullanılan sıvı temizleyicilerinden faydalanılabilir.

Maintenance for Stainless Steel Products

Stainless steel is a metal alloy, the most important elements of which are chrome and nickel. Stainless steel gets its lustre from the chrome and its stainless quality from the nickel. Stainless steel may be prone to surface rust, but only as a result of prolonged contact with base metals.

Adhering to the maintenance tips will ensure that you enjoy your product for even longer. If you handle your product with care, it will retain its quality and appearance for much longer.

Cleaning your stainless steel product

For everyday maintenance we advise using clean water or a wet cloth only. The product's surface must be cleaned with a wet cloth for dust, dried stains, and food and beverages residues.

Dish liquid soap may be used to clean the surface from dried grease stains. Afterwards the surface must be fully dried. Please note dish liquid must not contain bleach, such as Cif.

Stains caused by chemical substances

The quality of the product will be damaged if it is exposed to harsh chemicals. If the surface is exposed to harsh chemicals for a long period of time an oxidization process may occur, which will cause the stainless steel to rust.

You are advised to prevent the product from coming into contact with the following chemicals: S-39 solder ux, paint stripping agents, brush cleaners, metal shavings, and adhesives.

Should the product come into contact with one of the above-mentioned chemicals, the following action should be taken:

- Rinse the affected surface immediately using plenty of water;
- Rub the affected surface dry;
- Treat the resulting stains with Inox Care;

If the cleaning water is calcareous, there may be some spots left on the surface. It will be sufficient to use of a non-rigid particulate and brous structure cloth.

If there are finger prints on the stainless steel products surface, liquid window cleaner can be used.
